

ABSTRACT

A beverage container holder for a vehicle, comprises a housing defining a space for storing a beverage container and at least one slidable container supporter. The housing further defines a horizontal direction, and the at least one slidable beverage container supporter has a first end and a second end for securing the beverage container in the housing. The beverage container may further comprise a guiding means for guiding the slidable beverage container supporter to move within the housing, and a fixing means for fixing the slidable beverage container supporter in a desired place with respect to the housing.
